

SERVICE BROCHURE

Establishment Compliance

Give every location a clear compliance record.

Registration support and establishment compliance coordination.

01 Location and entity mapping

Build a shared view of operating locations, business entities and site contacts. Compare the recorded position with information supplied by the business, and identify missing premises documents or inconsistent establishment details.

02 Registration and record coordination

Organise the information needed for agreed applications, updates and submissions. Record dependencies on business approvals, supporting evidence and external processing, so that an incomplete input is distinguishable from an item already submitted.

03 Change and evidence management

Connect site changes with the records that need review. Maintain an accessible document history and action register, allowing teams to trace what changed, who confirmed it and where the latest evidence is held.
